

6 FREE POINT OF SALE SOFTWARE FOR SMALL BUSINESSES

If you have a business where you have to prepare an invoice for the customer or retailer, then there are some good free Point of Sale Software with good graphical interfaces, support for touch screens & ticket printers, barcode scanners, etc available. We discuss the six popular ones...

- Raj Kumar Maurya

uniCenta oPOS

It is a multi-lingual POS (Point-Of-Sale) application designed for Touchscreens. It supports industry standard hardware and is capable of running on display sizes from as little as 800x600 upwards.

Installing uniCenta oPOS is simple and fast and it comes packaged with its own built-in Apache Derby Embedded database. It's also multi-terminal, multi-location and supports a range of proven commercial-grades databases such as Apache Derby Client/Server, MySQL, HSQLDB, PostgreSQL and Oracle 11g.

ProffittCenter

Proffittcenter is an Electronics at the Point of Sale program with a good sales screen and intelligent

adaptive ordering system. ProffittCenter EPOS is another completely free POS system and is like a cash register – it takes money, runs discounts etc. Also, it has capabilities of reports and some inventory management. ProffittCenter is actually a great solution for merchants who are new to POS software. It's got a great user interface, and it has the basic functionality to allow a new user to learn how to operate and set up POS software.

Florent

It is an enterprise Grade Open Source Restaurant Point of Sale portable application. It can run from Pen drive, Linux distros, Mac 10.4+ and Windows XP to 8.1.(Requires Java 7+). It can be used as single cash terminal with embedded database or multiple terminals in a client-server model. It supports a wide range of Databases and is ready to connect with Oracle and MSSQL. Supports Commercial free plugins for Inventory Control, Transactions including Purchase, Move, Wastage, restocking levels, Warehouse for Raw material and Finished items.

Openbravo Java POS

Openbravo Java POS is a point of sale application designed for touch screens, supports ticket printers, customer displays and barcode scanners, supports different type of hardware, cash drawer and has inventory.

It is multiuser providing product entry forms, reports and charts.

Open Source Point of Sale

Open Source Point of Sale is a web based point of sale

system written in the PHP language and suitable for small and medium stores. It uses MySQL as the data storage back-end and has a simple user interface. It has a master database for customer, sales, supply, employee and provides flexible reporting. However, being a web based POS it has limited support for POS printer and cash drawer.

POSpier

POSpier is a Point Of Sale (POS) System designed for small businesses. It supports a wide range of hardware and databases. It offers Intuitive touch screen operation and user-oriented design for retail and restaurants. Also, it supports multiple devices such as printers, scales, cash drawers, scanners and card readers. □
